

Steps

After reviewing the resources for this assignment, do the following steps...

1. Start a Word document, making sure you start with your name, the assignment name and the due date.
2. Following the instructions, establish Samba as a File Server on your Ubuntu server VirtualBox installation.
3. Take a screenshot of the terminal window after restarting Samba and setting the password.

```
Ubuntu Web Server [Running] - Oracle VirtualBox
File Machine View Input Devices Help

# Change this to the workgroup/NT-domain name your Samba server will part of
workgroup = WORKGROUP

# server string is the equivalent of the NT Description field
server string = %h server (Samba, Ubuntu)

### Networking ###

# The specific set of interfaces / networks to bind to
# This can be either the interface name or an IP address/netmask;
# interface names are normally preferred
# interfaces = 127.0.0.0/8 eth0

# Only bind to the named interfaces and/or networks; you must use the
# 'interfaces' option above to use this.
# It is recommended that you enable this feature if your Samba machine is
# not protected by a firewall or is a firewall itself. However, this
# option cannot handle dynamic or non-broadcast interfaces correctly.
# bind interfaces only = yes

davidfinal@finalproject:~$ sudo smbpasswd -a $USER
