

Assignment is also being completed for C#

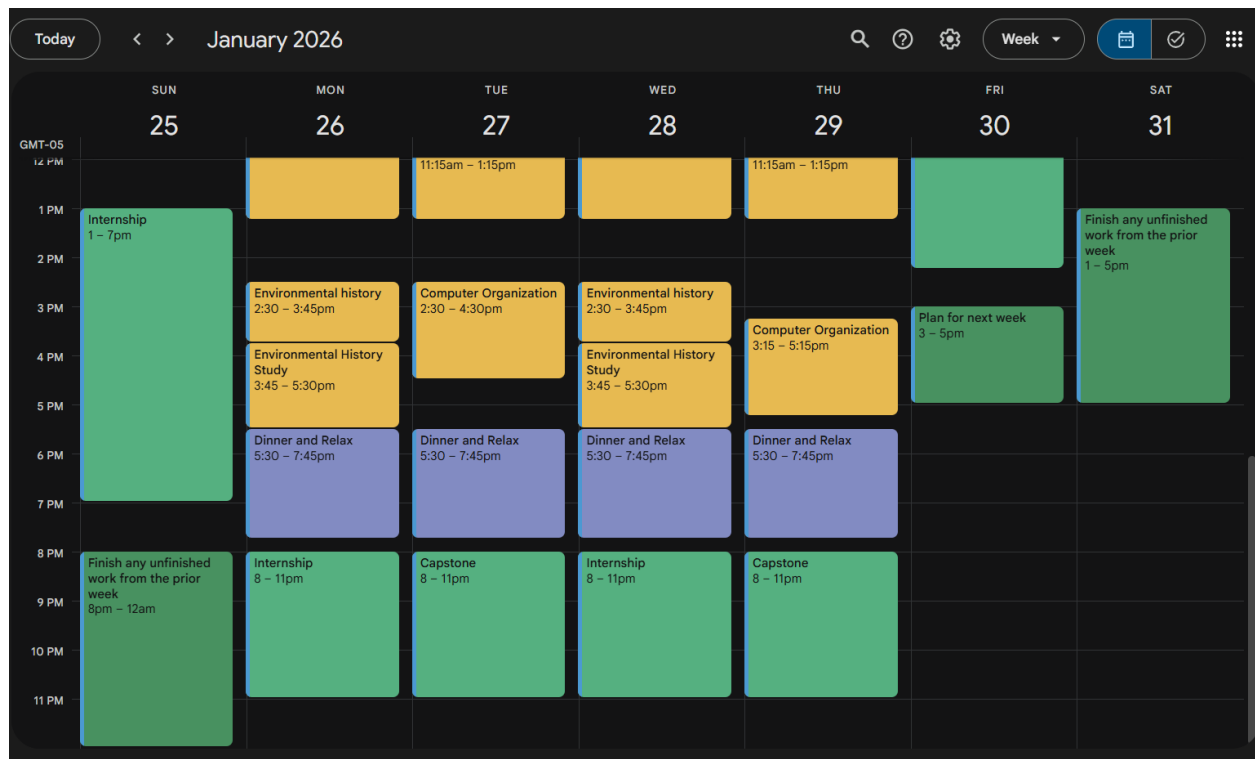

Reflection:

This semester I'm taking 4 classes, a 200-hour internship, and need to finish my capstone. Due to this, I think it's important to plan out my days so that I can properly account for everything. Usually, I'm not very good at setting concrete times for all my different activities, so using previously made methods helped me a lot. It also helped with advice about the amount of time I should spend on each class to maximize productivity. Overall, I'm excited to see how this schedule works for me.

Completed Study Tool (study schedule):

Each screenshot shows 12 to 12.

Prompt Screenshots:

I have a total of 4 classes, a 200 hour internship, and a capstone project this semester. How can I evenly distribute my time to each class?

If there's any work that I couldn't finish during the week, what should I do?

What should I do with any extra time I have? From either work not taking as long as I thought or cancelled classes?

How heavy should my load be over the weekend?
